Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Carrie Ryan

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Michele Buczkowski

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.
To lose even one of earth's living creatures would be devastating to
our future generations. Please do all that you can do to help.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mrs. Brenda Harless

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. Richard Maxfield

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Claudia Garoutte

Brian Millsap

Dear Millsap,

At this time I am writing this message as a supporter of
scientifically sound wildlife management who understands the value
wolves can bring to ecosystems, I am writing to urge you to take a
more balanced approach to Mexican wolf recovery efforts in the

Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this important matter to save these incredible creatures. They have the right to live on Planet Earth, just as much as humans do.

Sincerely,

Mr. Francis Warren

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mrs. Cheryl McKiernan

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mrs. Susan Egolf

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Christine Brown

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Alexis Grone

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Michele Reilly

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Ms. Megan Andersson

wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Dr. David Brothers, M.D.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Tonya Eza

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Christopher Wright

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. William Willoughby

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Irina Foster

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. chet hepburn

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Chuck Kelly

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Please act.The wolves mean a great deal to many of us.

Sincerely,

Mr. Roger Parris

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Brian Millsap

Dear Millsap,

As an occasional visitor to the southwest and as a supporter of
scientifically sound wildlife management who understands the value
wolves can bring to ecosystems, I am writing to urge you to take a
more balanced approach to Mexican wolf recovery efforts in the

Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. Raymond Belding

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Ms. Daria Kerridge

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. Peter Wright

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery

efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Mr. Charles Vaden

Brian Millsap

Dear Millsap,

I am writing to urge you to take a more balanced approach to Mexican
wolf recovery efforts in the Southwest. A balanced approach is needed
to give the Mexican Gray Wolf a fighting chance which is something
that has been lacking.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mr. Ronald Christ

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.

Sincerely,

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60 wolves in the wild lands of the Southwest, more than 40 short of the reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But despite these facts, the Service hasn't made much progress in restoring them.

There are millions of acres of public land in the Southwest where wolves could thrive, but Mexican wolves continue to be confined to a much smaller, politically defined recovery area. The rules as they stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I am asking you to make the following changes in the reintroduction rule.

First, "uplist" the Mexican wolf to Experimental Essential status. This will preserve the management flexibility of the rule, but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them and ensure that any authorized removals take into account individual wolves' genetic value, the size and health of the population, the number of breeding pairs, and whether progress toward recovery is being made.

I am confident that if you make all of these changes, the Mexican gray wolf recovery program will get back on track and these wolves will have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important matter.

Sincerely,

Mrs. Mitzy Barreto

Brian Millsap

Dear Millsap,

As a supporter of scientifically sound wildlife management who
understands the value wolves can bring to ecosystems, I am writing to
urge you to take a more balanced approach to Mexican wolf recovery
efforts in the Southwest.

After ten years of reintroduction efforts, there are fewer than 60
wolves in the wild lands of the Southwest, more than 40 short of the
reintroduction goal of establishing 102 wolves in the wild by 2006.

Mexican wolves are one of the most endangered animals in the world and

play an important role in restoring balance to Southwest forests. But
despite these facts, the Service hasn't made much progress in
restoring them.

There are millions of acres of public land in the Southwest where
wolves could thrive, but Mexican wolves continue to be confined to a
much smaller, politically defined recovery area. The rules as they
stand do not live up to the promise of the Endangered Species Act.

As one of 900,000 members and supporters of Defenders of Wildlife, I
am asking you to make the following changes in the reintroduction
rule.

First, "uplist" the Mexican wolf to Experimental Essential
status. This will preserve the management flexibility of the rule,
but require that other agencies consult about impacts on wolves.

Second, allow the wolves to disperse beyond the recovery area, and to
be released where biologists say is best.

Third, don't limit wolf numbers, or allow any new reasons to kill them
and ensure that any authorized removals take into account individual
wolves' genetic value, the size and health of the population, the
number of breeding pairs, and whether progress toward recovery is
being made.

I am confident that if you make all of these changes, the Mexican gray
wolf recovery program will get back on track and these wolves will
have a real chance at recovery in the wild lands of the Southwest.

Thank you for considering my viewpoints on this incredibly important
matter.
